
Supervisor & Viewer Onboarding

Signing in and monitoring with RTM View Shell

What you will learn

- Signing in securely — SSO or password, plus the e-mailed code
- Finding your way around the screens
- Reading and controlling a live dashboard
- Running historical reports
- Posting Info Slot messages (if your group may)
- Managing your own profile

- Use Sign in with SSO if your organisation offers it — one click with your corporate account.
- Otherwise enter your username or e-mail and password.
- Then type the 6-digit code e-mailed to you (valid 10 minutes, 3 attempts, resend once a minute).
- Any failure shows the same message — re-check and try again.

First sign-in & forgotten passwords

- On first sign-in you must set a new password — a live checklist shows the rules (12+, mixed, not your last 10).
- Forgot your password? Use “Forgot password?” on the sign-in page for an e-mailed reset link.
- Passwords expire periodically; you’ll be prompted to set a new one.

Finding your way around

- You land on Screens — the dashboards you're allowed to see.
- The sidebar shows only what your role allows; a Viewer's sidebar is short by design.
- If something you expect is missing, it's almost always a permissions matter — ask your administrator.

- **Top bar:**
- dashboard name · “Live · update 5s” · warning count · Pause/Resume · your name.
- **Queue tabs:**
- All queues, or focus on one queue’s tab.
- **Pause:**
- freeze the numbers to study or capture them; Resume to catch up. Only affects your view.
- **Status bar:**
- confirms the connection and latency at the bottom.

- Beyond the live dashboards, the Reports page (/reports) shows what happened over a chosen period.
- Four reports: Queue Interval, Queue Wait Time, Agent Monthly, Agent Shift Detail.
- Set From/To dates (inclusive of today), filter by queue/agent, and Apply.
- You see only the queues and agents your permission group permits.
- Detail: Historical Reports Guide (B-07).

Posting Info Slot messages

- Info Slots put short live messages on dashboards — shift notes, alerts, reminders.
- If your group has access, go to /info-slots, pick a slot, and Add Message.
- Set Priority (High shows first) and an optional expiry that clears the message automatically.
- Detail: Info Slot Message Management (B-03).

Your profile

- Change your password, turn two-factor on/off (unless mandatory), and set your language.
- The interface switches language immediately — including right-to-left layouts.
- **On a shared computer, always Sign out when you finish.**

Good monitoring habits

- Keep dashboards on All queues for the overall picture; switch to one queue to investigate.
- Pause before discussing or screenshotting a figure.
- Use reports for after-the-fact analysis; dashboards for live monitoring.
- Trust the warning badge as your cue for where to look first.

Key takeaways

- Sign in safely — password (or SSO) plus the e-mailed code.
- The viewer is live; Pause when you need it still.
- Reports (B-07) answer ‘what happened’; dashboards answer ‘what’s happening now’.
- Look after your profile and sign out on shared machines.
