
Info Slot Feature Training

Putting live messages on contact-centre dashboards

What is an Info Slot?

A simple, powerful way to talk to the floor.

- **A named channel for live, human-written messages shown on dashboards.**
- Unlike data widgets, it carries text written by staff — not platform metrics.
- Messages are stored in the shell and pushed to screens in real time.
- Use it for shift notes, service alerts, reminders and announcements.

How it fits together

- **Administrator**
- creates the Info Slot and assigns which groups may write (/admin/info-slots).
- **Editor**
- places the Info Slot widget on a dashboard.
- **Authorised users**
- write messages (/info-slots) that appear instantly on those dashboards.

- **Ticker** — messages scroll continuously across the widget.
- **Sequential** — one message at a time, auto-advancing every few seconds (min 3).
- You can switch modes live from the Manage messages view; it updates every screen at once.
- In both modes, High-priority messages are shown first.

Writing a message

- Open /info-slots, pick a slot you have access to, select “+ Add Message”.
- **Content**
- the message text (required).
- **Priority**
- Normal or High — High is shown first and can be styled to stand out.
- **Expires At**
- optional — the message removes itself at that time; or “Never expires”.

Editing, removing, expiry

- Edit a message inline with the pencil; deactivate to take it down.
- Viewers/Editors manage their own messages; Administrators manage any.
- **Messages with an expiry clear themselves — safe for time-bound notices.**

Example — an outage notice

- Content: “Payments system degraded — expect delays.”
- Priority: High · Expires At: today 15:00.
- It appears at the front of the slot on every dashboard showing it...
- **...and disappears on its own at 15:00 — no follow-up needed.**

- Keep messages short and specific — they share screen space with live data.
- Use High priority sparingly, for things that truly need attention.
- Always set an expiry for time-bound notices so the board stays current.
- Remove a message as soon as it's no longer relevant.

Key takeaways

- Info Slots = live, human messages on dashboards.
- Admin creates & assigns; authorised users write.
- Priority and expiry keep the board useful and current.
- Switch Ticker/Sequential live to suit the screen.
