Appendix A — Sign-in troubleshooting.....	6

1. Before you start

You need three things: the web address of your RTM View Shell (usually a name in front of the company domain — e.g. acme.cc-dashboard.local); your username or e-mail; and access to the mailbox tied to your account, because sign-in uses an e-mailed verification code.

RTM View Shell runs in any modern browser — Chrome, Firefox, Edge (latest two versions) or Safari 16+. The connection is always secured (HTTPS); if your browser warns that the address is not secure, stop and contact your administrator.

2. Signing in

There are two ways to sign in. Your organisation decides which is available to you.

Single Sign-On (SSO). If your organisation uses SSO, the sign-in page shows a prominent Sign in with SSO button at the top — use your corporate account. If your SSO provider already performed a multi-factor check, you will not be asked for a separate code.

Username and password. Below the divider “or username and password”, enter your username or e-mail and your password, then select Sign in. Passwords are at least 12 characters and mix upper-case, lower-case, a digit and a special character.

One message for every problem

If sign-in fails, you always see the same message — “Invalid username or password” — whether the username, the password, or something else was wrong. This is deliberate: it stops anyone probing for valid accounts.

3. Two-factor authentication (the e-mailed code)

After your password is accepted, RTM View Shell sends a 6-digit code to your account’s e-mail and shows a “2FA · step 2 of 2” screen. Open your mailbox, read the code from the message body (the subject never contains it), and type it in.

- The code is valid for 10 minutes.
- You have 3 attempts; after that the code is cancelled and you request a new one.
- Resend is available once per minute if the code did not arrive — check spam first.

4. Your first password change

The first time you sign in — and again whenever your password reaches its expiry (90 days by default) — you must set a new password before anything else. A live checklist turns green as you satisfy each rule:

- at least 12 characters;
- an upper-case letter (A–Z);
- a lower-case letter (a–z);
- a digit (0–9);
- a special character (! @ # \$...);
- and it must not match any of your last 10 passwords.

5. If you forget your password

On the sign-in page select **Forgot password?**, enter your e-mail, and select **Send link**. If an account exists, a reset link is e-mailed (valid 24 hours). For your security the page shows the same confirmation whether or not the address is registered.

6. Finding your way around

After signing in you land on **Screens** — the dashboards you are allowed to see. On the left is the navigation sidebar, grouped into sections; you only see items your role and permissions allow:

- **Content** — Screens (your dashboards) and Widget Catalogue.
- **Administration** — Users and Permission Groups (administrators only).
- **Tenant** — Tenant Settings and Audit (administrators only).
- **Platform** — Tenants (the platform Superadmin only).

The four roles: a Viewer sees/opens permitted dashboards; an Editor also creates/edits dashboards; an Administrator manages users and permission groups; the Superadmin governs the whole platform. If something you expect is missing, it is almost always a permissions matter — ask your administrator.

7. Opening a dashboard

From **Screens**, select a dashboard card to open it. A dashboard shows live data with a “Live · update 5s” indicator; you can **Pause** and **Resume** live updates, and switch between queues using the top tabs. The full viewer is the **Dashboard Viewer Guide (B-05)**.

8. Your profile

From your profile you can change your password, turn two-factor on or off (unless your administrator requires it), and set your preferred language; the interface switches immediately, including right-to-left layouts. See the **Profile & Settings Guide (B-04)**.

9. Signing out

Use **Sign out** from the top bar when you finish, especially on a shared computer — it ends your session and clears your preferences from that browser.

Appendix A — Sign-in troubleshooting

Symptom	What it means	What to do
"Invalid username or password"	Username, password, or account/organisation mismatch	Re-check; if it persists, contact your administrator
Account locked	5 failed attempts → 15-minute lockout	Wait 15 minutes, then try again
Code did not arrive	E-mail delay or spam	Check spam; use Resend (once per minute)
"Code expired"	More than 10 minutes passed	Request a new code and enter it promptly
Forced password change rejected	A rule is unmet (often last-10 history)	Follow the live checklist; use a password you have not used before
