1. What the widget catalogue is

The widget catalogue is the shared, platform-wide list of widget types that can be placed on a dashboard. It groups widgets into categories so you can find the right one when building a screen. It is browsed from the Widget Catalogue item in the navigation sidebar, available to Editors, Administrators and the Superadmin.

2. Browsing the catalogue

Widgets are organised by category and name, each with a short description and an icon. From the screen builder you select one or more widgets to add to a dashboard; the layout and configuration are handled in the screen editor. Inactive widgets are hidden from everyone except the Superadmin, so you only ever see types that are available to use.

3. Categories and widget types

The catalogue ships with the following categories and representative widget types; your installation may add more:

Queues

Widget	Shows
Queue Summary	Headline queue figures — waiting, longest wait, handled
Queue Trend	How a queue's key measures move over time
Abandoned Calls	Count and rate of calls abandoned in queue
SLA Bar	Service level against target, as a bar

Agents

Widget	Shows
Agent Status	Live status of each agent (available, on call, break, ...)
Agent List	A roster-style list of agents and their current state
Occupancy Gauge	How busy agents are, as a gauge

General metrics

Widget	Shows
KPI Scorecard	A grid of headline key-performance numbers
Calls Per Hour	Call volume by hour
AHT Chart	Average handle time as a chart
Real-time Ticker	A running feed of notable events

4. Managing the catalogue (Superadmin)

Only the Superadmin can add, edit or deactivate catalogue items, because the catalogue is shared across every tenant. Deactivating an item hides it from all non-Superadmin users without removing

it. Editors and Administrators browse and use the catalogue but do not change it. Every catalogue change is recorded in the audit log.

5. Putting a widget on a screen

When you create or edit a dashboard, you pick widgets from the catalogue by category. Selecting a widget registers it on the dashboard; arranging and configuring it happens in the screen editor. The dashboard you build is what the Dashboard Viewer (B-05) presents to users.

Appendix A — Catalogue at a glance

Category	Widget types (ships with)
Queues	Queue Summary · Queue Trend · Abandoned Calls · SLA Bar
Agents	Agent Status · Agent List · Occupancy Gauge
General metrics	KPI Scorecard · Calls Per Hour · AHT Chart · Real-time Ticker

Access: browse — Editor, Administrator, Superadmin; manage (add/edit/deactivate) — Superadmin only; deactivated items are hidden from non-Superadmin.
